Unit 5: Relations & Functions

Submission Checklist: (make sure you have included all components for full marks)

- Cover page & Assignment Log
- Class Notes
- Homework (attached any extra pages to back)
- Quizzes (attached original quiz + corrections made on separate page)
- Practice Test/ Review Assignment

<tr>
<td>Unit/ Chapter test</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
1. Using the following graph, answer the questions below. The graph shows the distance a rock climber is from the base of the cliff as time passes.

a) Place each line segment in the appropriate section of the table. OA, AB, BC, CD, DE, EF, FG.

<table>
<thead>
<tr>
<th>Climbing</th>
<th>Resting</th>
<th>Descending</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>

<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

b) Describe one property a line segment has if the climber is climbing.

c) Describe one property a line segment has if the climber is resting.

d) Describe one property a line segment has if the climber is descending.

e) How would the graph of the line segment be different if he increased his speed for the first time he climbed?

f) What would you add to the graph to show the climbers return to the bottom of the cliff?
2. Match each graph below with a situation from the list given. Then, draw each graph carefully labeling each axis to show the quantities being compared.

- Graph A
- Graph B
- Graph C
- Graph D

a) the temperature of a cup of hot chocolate over time  
b) a car accelerating to a constant speed  
c) the distance a person walks during a hike  
d) the height of a soccer ball kicked across a field
3. Create a speed-time graph for the following scenario. Label each section of your graph with capital letters, and write a description of what is happening at each line segment.

Connor is riding his skateboard along a path. Almost immediately after leaving home, Connor travels down a short steep hill. At the bottom, the path makes a turn. The remainder of the trip is on relatively flat land. Connor kicks to keep moving. He then stops before a railway crossing. He also practises a few tricks along the way. He completes a basic “ollie” and performs a second ollie over a speed bump. Finally, after travelling at a constant rate for the last part of the trip, Connor arrives at his destination.

Graph:

- **Hint**: make sure to graph the *independent variable* on the horizontal axis, and the *dependent variable* on the vertical axis.

Explanation:
Summary Ideas:

- A graph represents the relationship between two quantities.
- Straight lines are used to indicate a constant rate of change.
- Horizontal lines are used if one quantity is NOT changing relative to the change in the other quantity.

- A steeper line indicates a ______________ rate of change. This line could represent either an increase or a decrease.
- A curve shows that the rate of change is ________________.

Introduction to Relations

Relationships exist everywhere we look...

- There is a relationship between the lengths of lineups at the fair and how exciting the rides are.
- There is a relationship between the height of a ball and how long ago it was kicked.
- There is a relationship between traffic and the time of day.
- There is a relationship between distance travelled and the speed of the car.

Some relationships don’t even seem to have a mathematical relationship but are connected in some other way.

For example: The students in your class all have a birth month and height. We could write a list matching each student’s birth month and height.

As ordered pairs... (3, 155), (5, 138), (11, 162), (12, 135), (7, 142), ...

(March, 155 cm tall)

Some notes here...

Challenge Question:
1. Give examples of three other relationships you see on an everyday basis:

2. Write a set of 3 ordered pairs for one of your relationships above. Explain what the ordered pair means.
Use the following information to answer questions below.

Consider the data given in following table:

<table>
<thead>
<tr>
<th>Student</th>
<th>Height (cm)</th>
<th>Arm Span (cm)</th>
<th>Written as ordered pairs.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lulu</td>
<td>135</td>
<td>137</td>
<td>(135, 137)</td>
</tr>
<tr>
<td>Bones</td>
<td>144</td>
<td>151</td>
<td>(144, 151)</td>
</tr>
<tr>
<td>Phat Charlie</td>
<td>150</td>
<td>148</td>
<td>(150, 148)</td>
</tr>
<tr>
<td>Lucky</td>
<td>150</td>
<td>156</td>
<td>(150, 156)</td>
</tr>
<tr>
<td>Dizzy Dee</td>
<td>165</td>
<td>165</td>
<td>(165, 165)</td>
</tr>
<tr>
<td>Crash</td>
<td>155</td>
<td>152</td>
<td>(155, 152)</td>
</tr>
<tr>
<td>Anjohkinu</td>
<td>160</td>
<td>164</td>
<td>(160, 164)</td>
</tr>
<tr>
<td>Sam</td>
<td>200</td>
<td>210</td>
<td>(200, 210)</td>
</tr>
<tr>
<td>Talloola</td>
<td>125</td>
<td>127</td>
<td>(125, 127)</td>
</tr>
</tbody>
</table>

3. Why do you think the numbers in brackets are called “ordered pairs”?

4. The data above represents a relation between what two quantities?

5. Graph the data in the table above (Trouble graphing? See next page).

Graphs help to show if there is a pattern in the data.

If there is a pattern, a graph will show us what type of

6. Describe the relationship you see on the graph above.
   (What does it look like? What shape is it?)
2) RELATIONS & FUNCTIONS: GRAPHING RELATIONS

Warm-Up #1: You are walking to school at a rate of 100 ft/min.
   a) Copy and complete the table of values for this scenario.
   b) Graph your data on the grid below.

<table>
<thead>
<tr>
<th>Time, t (s)</th>
<th>Distance Walked, d (ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td>30</td>
<td></td>
</tr>
<tr>
<td>60</td>
<td></td>
</tr>
<tr>
<td>90</td>
<td></td>
</tr>
<tr>
<td>120</td>
<td></td>
</tr>
</tbody>
</table>

Warm-Up #2: You are walking to school at a rate of 150 ft/min.
   a) Copy and complete the table of values for this scenario.
   b) On the same grid as warm-up #1, graph the new walking data in a different colour.

<table>
<thead>
<tr>
<th>Time, t (s)</th>
<th>Distance Walked, d (ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td>30</td>
<td></td>
</tr>
<tr>
<td>60</td>
<td></td>
</tr>
<tr>
<td>90</td>
<td></td>
</tr>
<tr>
<td>120</td>
<td></td>
</tr>
</tbody>
</table>

Warm-Up #3: You live 5 km from school. You sleep in for the first 10 min of class.
   a) Complete the table of values for this scenario.
   b) Graph your data on the grid below.

<table>
<thead>
<tr>
<th>Time (min), t</th>
<th>Distance From School, d (km)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td></td>
</tr>
<tr>
<td>6</td>
<td></td>
</tr>
</tbody>
</table>
What is a Relation??

Relation

Relations can be Represented in Many Ways:

1. In Words: _____________________________________________________________________________

2. A Table of Values:

3. A Set of Ordered Pairs: __________________________________________________________________

4. An Equation: _____________________________

5. A Graph:

Example 1: The value of a car depreciates with each year. Using the information from the table of values, present the relation in each of the other ways.

<table>
<thead>
<tr>
<th>Time (years)</th>
<th>Value (thousands of dollars)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>15</td>
</tr>
<tr>
<td>2</td>
<td>13</td>
</tr>
<tr>
<td>4</td>
<td>11</td>
</tr>
<tr>
<td>6</td>
<td>9</td>
</tr>
<tr>
<td>8</td>
<td>7</td>
</tr>
</tbody>
</table>

Ordered Pairs:

Equation: _______________________________

Words: _____________________________________________________________________________________
Example 2: Using a table of values, plot the relation described by $y = x$.

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Example 3: Using a table of values, plot the relation described by $y = 3x - 4$.

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Example 4: Using a table of values, plot the relation described by $y = -\frac{3}{2}x$.

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
What is a relation?

**Definition 1:**
If two groups of items are related, the set of all possible pairings is called a relation.

For example:
- A person's height and their arm span.
- Distance travelled and driving time.
- Exam score and study time.

**Definition 2:**
A relation is the set of ordered pairs that connects two sets.

**Definition 3:**
7. Write your own...

---

**Domain:**
The set of first items in a relation.

**Range:**
The set of second items in a relation.

---

Some notes here (possibly)...
Graphing Relations on a Coordinate Plane

Below are two examples of the Coordinate Plane

8. The vertical line with numbers on it is called the ____________
9. The horizontal line with numbers on it is called the ____________

10. What is the difference between each of the graphs shown above?

11. Describe a scenario where it is more appropriate to use the graph on the right.

12. Describe a scenario where it is more appropriate to use the graph on the left.

13. How could you describe to another student where to plot a point on the plane? For example: (2, 5)

14. Plot and label the following ordered pairs on each of the grids above (whenever possible):
   A(1,2), B(-3,5), C(10, 4), D(-3, -7), E(8, -2)
Coordinate Geometry (Cartesian Coordinate Geometry)

Based on the coordinate plane.

- The coordinate plane has two axes.
- The vertical y-axis.
- The horizontal x-axis.
- The point where the axes meet is called the origin.

Every point on the plane can be located using two numbers called coordinates or an ordered pair.

The ordered pair is always given as (x, y). The coordinates of the origin are (0, 0).

Example: Point A has coordinates (4, 2).
- 4 is an element of the domain.
- 2 is an element of the range.

**15. Challenge Question:**
Using the graph below, plot the relation described by the equation \( y = 2x \).
Graphing relations using a Table of Values.

Using the graph below, plot the relation described by the equation $y = 2x$.

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td>-2</td>
<td>-4</td>
</tr>
<tr>
<td>-1</td>
<td>-2</td>
</tr>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>-2</td>
</tr>
<tr>
<td>2</td>
<td>-4</td>
</tr>
</tbody>
</table>

A Table of Values: Choose a few reasonable input values ($x$), then calculate output values ($y$). This produces some ordered pairs to plot our relation.

Using the graph below, plot the relation described by the equation $y = \sqrt{x + 2}$.

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td>-2</td>
<td>0</td>
</tr>
<tr>
<td>-1</td>
<td>1</td>
</tr>
<tr>
<td>2</td>
<td>2</td>
</tr>
<tr>
<td>7</td>
<td>3</td>
</tr>
</tbody>
</table>

Can you see why I chose these particular input ($x$) values?

17. Are there any input values that would not make sense? Are there any that are “not permitted”?

18. Are there any input values that would not make sense? Are there any that are “not permitted”?

19. Consider your answers to the previous two questions. What effect do “not permitted” input values have on the graph of the relation?

When creating a table of values, you should consider:

- Positive Inputs (domain)
- Negative Inputs (domain)
- Zeros
- Non-permitted input values
Graphing Relations continued...

20. Using the table and graph below, plot the relation described by the equation \( y = 3x \).

\[
\begin{array}{c|c}
\hline

Graphing Relations continued...

32. Using the table and graph below, plot the relation described by the equation $y = 1 - 2x$.

33. Using the table and graph below, plot the relation described by the equation $y = x$.

34. Using the table and graph below, plot the relation described by the equation $x = 2y$.

35. **CHALLENGE** Using the table and graph below, plot the relation described by the equation $y = |x|$ (where $x$ is an absolute value, meaning the magnitude of a real number without regard to its sign).
3) Relations & Functions: Domain and Range

Warm-Up #1: List all the values of $x$ in each relation.

a) $(1, 3), (2, 5), (9, 4)$

b) 

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td>-3</td>
<td>4</td>
</tr>
<tr>
<td>-1</td>
<td>7</td>
</tr>
<tr>
<td>0</td>
<td>1</td>
</tr>
</tbody>
</table>

c) $y = 2x - 3$

Warm-Up #2: List all the values of $y$ in each relation.

a) $(1, 3), (2, 5), (9, 4)$

b) 

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
</tr>
</thead>
<tbody>
<tr>
<td>-3</td>
<td>4</td>
</tr>
<tr>
<td>-1</td>
<td>7</td>
</tr>
<tr>
<td>0</td>
<td>1</td>
</tr>
</tbody>
</table>

c) $y = 2x - 3$

Warm-Up #3: For each relation, write an inequality statement.

a) 

\[ -4 \leq x \leq 2 \]

b) 

\[ -2 \leq x \leq -2 \]

c) 

\[ -4 \leq y \leq 3 \]

d) 

\[ -1 \leq x \leq 3 \]

What is different about part d in the warm up?
Warm-Up #4: Fill in the table below, with the correct symbol for each number set. Then, identify the number set represented in the examples from warm-up #1.

<table>
<thead>
<tr>
<th>Number Set</th>
<th>Symbol</th>
</tr>
</thead>
<tbody>
<tr>
<td>Real</td>
<td>R</td>
</tr>
<tr>
<td>Rational</td>
<td>Q</td>
</tr>
<tr>
<td>Irrational</td>
<td>Q</td>
</tr>
<tr>
<td>Integer</td>
<td>Z</td>
</tr>
<tr>
<td>Whole</td>
<td>W</td>
</tr>
<tr>
<td>Natural</td>
<td>N</td>
</tr>
</tbody>
</table>

Review your answer in the warm up. Identify the appropriate number set for each inequality.

a) ____________________________
b) ____________________________
c) ____________________________
d) ____________________________

When interpreting information to solve a problem, it is important to make sense of the possible values of each quantity being compared.

Example #1: Determine the possible values for each quantity in the given relation.

![Graph](image)

When comparing two quantities, the words **DOMAIN** and **RANGE** are used to describe the values that are appropriate.

The ____________ is the set of all possible values for the **independent** variable in a relation.

The ____________ is the set of all possible values for the **dependent** variable in a relation.
There are a variety of ways to express the domain and range of a relation.

1. **Words** – A description of the value that are allowed.
   
   Example: the range is the set of all whole numbers less than twenty

2. **Number Line** - A picture of the values that are allowed.
   
   Example:

3. **A List** – used for discrete data
   
   Example: For the relation \{(3, 1), (2, −3), (7, 0.4)\}
   
   the domain is _______________________
   
   the range is _______________________

4. **Set Notation** – a formal way to give the values of the domain and range.
   
   Example: \{x | x \geq -1, x \in \mathbb{Z}\}
   
   **What does it all mean??**
   
   \{ \} = type of brackets used for a set
   
   | means “such that”
   
   \[ \in \] means “is an element of”
   
   (or “belongs to“)
   
   This statement is read as:

5. **Interval Notation** – uses different brackets to indicate an interval
   
   Example: [0, 10] means all numbers between zero to ten inclusive.
   
   Example: (0, 10) means all numbers between zero and ten (not including 0 or 10)
   
   Example: (10, \infty) means all numbers greater than 10
Example #2: Consider the Relation: *all real numbers between -5 and 2 including -5 but not including 2.*

<table>
<thead>
<tr>
<th>Number Line:</th>
</tr>
</thead>
<tbody>
<tr>
<td>[blank]</td>
</tr>
</tbody>
</table>

Set Notation:

Interval Notation:

Could I use a list? Explain.

Example #3: Complete the table.

<table>
<thead>
<tr>
<th>Words: your age from grade 1 until now</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number Line:</td>
</tr>
<tr>
<td>[blank]</td>
</tr>
</tbody>
</table>

List:

Set Notation:

Interval Notation:

Let’s see how this applies to graphs!
Example #4: Write the domain and range for each relation, as specified.

a) Domain as a list:

Range in set notation:

b) Domain in words:

Range in interval notation:

c) Domain in set notation:

Range in set notation:

d) Domain in interval notation:

Range in interval notation:

e) \{ (4, -1), (-1, 4), (-1, 3), (4, -3), (-3, 0) \}

Domain in set notation:

Range in set notation:
Domain & Range (continued)

Recall, (2,5) and (-3,7) are called ordered pairs because the order of the two elements is important.

- The first set of elements in the ordered pair is called the domain of the relation.
- The second set of elements in the ordered pair is called the range of the relation.

36. Challenge Question:
List the domain and range for the relation (1,1), (2,4), (3,9), (4,16)

Answer:
Domain: {1,2,3,4} Range: {1,4,9,16}

37. Which of the following is/are true?

   a. The domain is the set of permissible values of x.
   b. The domain is the set of permissible values of y.
   c. The range is the set of permissible values of x.
   d. The range is the set of permissible values of y.

Your notes here...
Domain & Range of Discrete Data (points): [Definition on page 25]

Remember, domain is all "first elements" and range is all "second elements".

Since we are often working with graphs that have an x-axis and a y-axis.

Domain is often described as all permissible values of $x$.
Range is often described as all permissible values of $y$.

Find the domain and range:

**Example:**
Find the domain and range of the relation:
$(2,3), (3,4), (4,5), (5, 6)$

**Solution:**
Simply list the first elements, then second:
domain: $\{2,3,4,5\}$  range: $\{3,4,5,6\}$

**Example:**
Find the domain and range of the following relation.

**Solution:**
First, find the coordinates of the BIG points:
$(2,4), (7,9), (10,-3)$

Domain: $\{2,7,10\}$
Range: $\{4,9,-3\}$

**It's OK that there is no apparent pattern...this is still a relation.**

Find each of the following.

<table>
<thead>
<tr>
<th>38. Find the domain for the following relation.</th>
<th>39. Find the range for the relation below.</th>
<th>40. Find the domain for the graphed relation.</th>
</tr>
</thead>
<tbody>
<tr>
<td>$(-2,4), (3,5), (5,7), (8,11)$</td>
<td>$(2,3), (4,3), (6,3), (8,3)$</td>
<td></td>
</tr>
</tbody>
</table>
41. **Challenge Question:** Find the domain of the following graph.

![Graph](image)

42. How many items are there in the domain of the relation above?

43. What is the smallest item in the domain?

44. What is the biggest value in the domain?

45. How many items are there in the range?

46. What is the smallest item in the range?

47. What is the biggest item in the range?
Domain & Range of Continuous Data (Lines and Curves):

When the graph of a relation is a line or curve, the domain and range cannot be expressed as a list of numbers as in the earlier questions. Why is this so?

Consider Example A and B.

<table>
<thead>
<tr>
<th>Example A</th>
<th>Example B</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Domain:</strong> $-4 \leq x &lt; 3$</td>
<td><strong>Domain:</strong> $x \geq -4$</td>
</tr>
<tr>
<td><strong>Range:</strong> $2 &lt; y \leq 4$</td>
<td><strong>Range:</strong> $y \leq 3$</td>
</tr>
</tbody>
</table>

The inequality symbols: $<, >, \leq, \geq, \neq$

**Set Notation:**
- $x \in \mathbb{R}$: The domain is the set of real numbers.
- $\{y | y \leq 0, y \in \mathbb{R}\}$: The range is the set of real numbers less than or equal to zero.

**Use Inequalities**

<table>
<thead>
<tr>
<th>Example A</th>
<th>Example A</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain: $-4 \leq x &lt; 3$</td>
<td>Domain: $[-4,3]$</td>
</tr>
<tr>
<td>Range: $2 &lt; y \leq 4$</td>
<td>Range: $(2,4]$</td>
</tr>
</tbody>
</table>

**Use Interval Notation**

<table>
<thead>
<tr>
<th>Example B</th>
<th>Example B</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain: $x \geq -4$</td>
<td>Domain: $[-4, \infty)$</td>
</tr>
<tr>
<td>Range: $y \leq 3$</td>
<td>Range: $(\infty, 3]$</td>
</tr>
</tbody>
</table>

**Use a number line**

- **Example A**
  - Domain: \[\quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \quad \ qua...

4) Relations & Functions: Graphing in a Domain

In Lesson 2, when we graphed functions, we graphed in the domain of all real numbers.

Now, when you graph a relation, the domain may be:

1. Given as \( R \) (all real numbers)
2. Given as a list, for example: \{-2, -1, 0, 1, 2\}
3. Given as an inequality, for example: \( x \geq 0 \)

**Example #1:** Graph the relation \( y = 2x + 1 \) in the following domains.

a) \( \{x \mid x \in R\} \)

b) \( \{x \mid x = -4, -3, 0, 4\} \)
Example #2: Find the domain and range of the following relations.

a) \( y = 2x - 8 \)

Domain =

Range =

b) \( y = \sqrt{x} + 3 \)

Domain =

Range =

c) \( y = x^2 - 1 \)

Domain =

Range =

**Hint:** Think about this in one of two ways:

1. Visualize the graph
2. Consider if there are any x-values that you can’t plug into the equation (ones that will give you an ERROR in your calculator)
67. Draw a graph using the following domain and range.
\[ \{x | x \geq 4, x \in \mathbb{R}\}, \{y | y \leq -3, y \in \mathbb{R}\} \]

68. Draw a graph using the following domain and range.
\[ \{x | -3 \leq x \leq 2, x \in \mathbb{R}\}, \{y | 5 \leq y \leq 8, y \in \mathbb{R}\} \]

69. Draw a graph using the following domain and range.
\[ \{x | x = 5\}, \{y | y \geq -4, y \in \mathbb{R}\} \]

70. Challenge Question:
Graph the relation represented by the equation \( y = 3x \).

71. What is the domain of \( y = 3x \)?

72. Challenge Question:
Graph the line represented by the equation \( y = 3x \) if the domain is \( x \geq -2 \).
Graphing Relations and Domain:

When graphing a relation, the domain may be:

- Given as $R$ (all real numbers)
- Given as a list such as $\{-2,-1,0,1,2\}$
- Given as an inequality such as $x \geq 0$.

We will consider the impact each of these have when graphing the relation $y = 2x$.

73. Graph the relation $y = 2x$.
   Domain: $\{x | x \in R\}$

74. Graph the relation $y = 2x$.
   The domain is $\{-2,-1,0,1,2\}$

75. Graph the relation $y = 2x$.
   Domain: $(0, \infty)$

Some notes here...
Graph the relation \( y = 2x \).
The domain is \( \{ x \mid x \in \mathbb{R} \} \).

Any values of \( x \) would be permissible. This results in a continuous line in both directions.

Two arrow heads!

Graph the relation \( y = 2x \).
The domain is \( \{-2,-1,0,1,2\} \).

Only the specified values of \( x \) would be permissible \( \{-2,-1,0,1,2\} \). This results in five discrete points on the graph.

Find the \( y \) values that go with these five \( x \) values.

Graph the relation \( y = 2x \).
Domain: \( (0, \infty) \).

Any values of \( x \) greater than 0 would be permissible. This results in a continuous line starting at \( x=0 \) and moving in the positive direction.

One arrow head!

Graph each of the following for the given domain.

76. \( y = 3x + 2 \)

Domain: \( \{ x \mid x \in \mathbb{R} \} \)

77. \( y = -2x - 4 \)

Domain is \( \{-3,-1,1,3\} \).

78. \( y = \frac{1}{2}x^2 \)

Domain is \( (\infty, 0) \)

79. \( y = x \)

Domain is \( \{ x \mid -2 \leq x \leq 2, x \in \mathbb{R} \} \)

80. \( y = x^2 - 2 \)

Domain is \( (-2, -1, 2, 1) \).

81. \( y - 5 = x + 2 \)

Domain is \( \{ x \mid x \in \mathbb{R} \} \)
82. In your own words, describe the different ways a relation may look due to restrictions on the domain.

Finding the domain and range of an equation.

Becoming more familiar with the equation of particular relations (assuming there is one) allows you to quickly determine the domain or range.

Possible Strategies:

- Visualize the graph from memory (or actually plot it).
- Consider possible restrictions based on the equation. For example, \( y = \sqrt{x} \) has a domain \( x \geq 0 \) because all negative values of \( x \) produce a “not real” output.

83. Find the domain of the relation: \( y = 3x \)

84. Find the domain of the relation: \( y = \sqrt{x-2} \)

85. Find the domain of the relation: \( y = x^2 \)

86. Find the range of the relation: \( y = 3x \)

87. Find the range of the relation: \( y = \sqrt{x-2} \)

88. Find the range of the relation: \( y = x^2 \)
89. Challenge Question:
Consider the various ways graphs look because of the restrictions on their domain before you answer the following question.

Use the equation $C = 10n$ to graph the cost, $C$, of a family with ‘$n$’ people to go to the movies.

90. Challenge Question:
Find a reasonable domain for the function above.

Find a reasonable range for the function above.

Some notes here...
5) Relations & Functions: Continuous/Discrete & Vertical Line Test

Warm-Up: Students at Reynolds are selling t-shirts during lunch for $10 each.

a) Complete the following table of values:

<table>
<thead>
<tr>
<th>Number of t-shirts sold</th>
<th>Total amount of money made, in dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td></td>
</tr>
</tbody>
</table>

b) Graph the relation:

![Graph of t-shirts sold vs. money made]

c) Can the dots be connected? Explain.

d) Fill in the table below, and add in your own example in.

<table>
<thead>
<tr>
<th>Type of Data</th>
<th>Continuous</th>
<th>Discrete</th>
</tr>
</thead>
</table>
| Characteristics | • Graph will appear as _______________.  
• Occurs when quantities don’t ______________ values.  
• Occurs when having ______________ of quantities makes sense.  
 | • Graph will appear as _______________.  
• Occurs when quantities can only be ______________.  
• Occurs when part numbers __________.  |
| Example | •

•  
• |

Introduction to Functions

A function is
When a relation is presented as a graph, a quick method to determine whether or not it is a function is known as the **VERTICAL LINE TEST**.

If a vertical line intersects the graph at more than one point, the relation **IS NOT** a function.

**Example #1:** Do these graphs represent functions?

a) ![Graph a)

b) ![Graph b)

c) ![Graph c)

**Example #2:** Do these relations represent functions? Justify your choice.

a) \{(1, 3), (2, 4), (3, 5), (4, 3), (2, 1)\}

b) | Name  | Shoe Size |
<table>
<thead>
<tr>
<th></th>
<th></th>

<td>Simon</td>
</tr>
</tbody>
</table>

d) \(y = 3x + 5\)

e) \(y^2 = x\)
Discrete and Continuous Data

From previous page...

Use the equation \( C = 10n \) to graph the cost, \( C \), of a family with ‘n’ people to go to the movies.

91. Why is the graph above a series of dots, not a continuous graph?

<table>
<thead>
<tr>
<th>Continuous Data:</th>
<th>Discrete Data:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Graph will appear as a line.</td>
<td>• Graphs will appear as a series of dots.</td>
</tr>
<tr>
<td>• Occurs when quantities don’t “skip” values...continuous things like time and temperature.</td>
<td>• Quantities such as whole items (people, cars, hamburgers, etc.)</td>
</tr>
<tr>
<td></td>
<td>• When part numbers don’t “make sense.”</td>
</tr>
</tbody>
</table>

Note: The first two points are mathematically correct but do not make sense in terms of the problem.
Answer the following questions.

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>92. A cup of coffee sits on the counter for several hours. Describe what would happen to the temperature of the coffee in the cup.</td>
<td>A cup of coffee sits on the counter for several hours. Temperature is a function of the time the coffee is on the counter.</td>
</tr>
<tr>
<td>a) What would be a reasonable domain for this function?</td>
<td></td>
</tr>
<tr>
<td>b) Discrete or Continuous (Circle one)</td>
<td></td>
</tr>
<tr>
<td>93. A cup of coffee sits on the counter for several hours.</td>
<td></td>
</tr>
<tr>
<td>94. A high school student is surveying the volume of traffic in the school parking lot. The number of cars in the parking lot is a function of the time of day.</td>
<td></td>
</tr>
<tr>
<td>a) What would be a reasonable range for this function?</td>
<td></td>
</tr>
<tr>
<td>b) Discrete or Continuous (Circle one)</td>
<td></td>
</tr>
<tr>
<td>95. Dalleep is plotting his height as a function of time.</td>
<td></td>
</tr>
<tr>
<td>a) What quantity would represent the domain? Height or Time (Circle one)</td>
<td></td>
</tr>
<tr>
<td>b) Height: Discrete or Continuous (Circle one)</td>
<td></td>
</tr>
<tr>
<td>c) Time: Discrete or Continuous (Circle one)</td>
<td></td>
</tr>
<tr>
<td>d) What would be a reasonable range?</td>
<td></td>
</tr>
<tr>
<td>96. The Cost of Energy Bars:</td>
<td></td>
</tr>
<tr>
<td>Cost is a function of ______________. Discrete or Continuous (Circle one)</td>
<td></td>
</tr>
<tr>
<td>97. Total Earnings (with hourly wage):</td>
<td></td>
</tr>
<tr>
<td>Earnings are a function of ______________. Discrete or Continuous (Circle one)</td>
<td></td>
</tr>
</tbody>
</table>
Functions:

A special class of relation in which there is only one output \((y)\) for every valid input \((x)\).

Consider the following tables:

<table>
<thead>
<tr>
<th>Table 1</th>
<th>Table 2</th>
<th>Table 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>(x)</td>
<td>(y)</td>
<td>(x)</td>
</tr>
<tr>
<td>-1</td>
<td>3</td>
<td>-2</td>
</tr>
<tr>
<td>0</td>
<td>0</td>
<td>-1</td>
</tr>
<tr>
<td>2</td>
<td>-6</td>
<td>0</td>
</tr>
<tr>
<td>4</td>
<td>-12</td>
<td>1</td>
</tr>
</tbody>
</table>

Domain \((x)\): \{-1, 0, 2, 4\}  
Range\((y)\): \{3, 0, -6, -12\}  

Domain \((x)\): \{-2, -1, 0, 1\}  
Range\((y)\): \{4, 1, 0, 1\}  

Domain \((x)\): \{4, 3, 2, 4\}  
Range\((y)\): \{2, 7, 12, 17\}  

Notice in Table 3, when the input \((x)\) is 4, there are two possible outputs, 2 or 17. This is NOT a function.

Tables 1 and 2 are both functions. Each element in the domain produces only one element in the range.

Some notes here possibly...
Which of the following relations are functions? Indicate why or why not.

98. (2,1), (3,5), (7,8), (9,12)
   YES or NO
   Why?___________
   ______________

99. (1,3), (5,3), (7,3), (12,3)

    | 2  | 5 |
    | -3 | -6 |
    | 8  | 7 |
    YES or NO
    Why?___________
    ______________

The Vertical Line Test:

You can test whether a relation is a function by using the vertical line test.

If you move a vertical line through the relation from left to right, the vertical line will only ever contact a function once. If the vertical line contacts the graph more than once at a given time, it is not a function.

Eg.1.

Yes, it is a function.
A vertical line will contact the function only once.

Eg.2.

No, not a function.
A vertical line may contact the function twice.
Determine if each of the following relations is a function or not.

104. \( y = 2x - 3 \) a function?
   YES or NO
   How do you know?

105. \( y = x^2 \) a function?
   YES or NO
   How do you know?

106. \( x = y^2 \) a function?
   YES or NO
   How do you know?

107. Is the relation \( y = 2x - 3 \) a function?
   YES or NO
   How do you know?

108. Is the relation \( y = x^2 \) a function?
   YES or NO
   How do you know?

109. Is the relation \( x = y^2 \) a function?
   YES or NO
   How do you know?

Some notes here possibly…

_________________________________________________________________
_________________________________________________________________
_________________________________________________________________
_________________________________________________________________
_________________________________________________________________
_________________________________________________________________
6) RELATIONS & FUNCTIONS: FUNCTION NOTATION

**Warm-Up #1:** Complete the table of values for the equation \( y = 3x + 2 \).

<table>
<thead>
<tr>
<th>( x )</th>
<th>( y )</th>
</tr>
</thead>
<tbody>
<tr>
<td>-3</td>
<td></td>
</tr>
<tr>
<td>-1</td>
<td></td>
</tr>
<tr>
<td>0</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td></td>
</tr>
</tbody>
</table>

Does this equation represent a function? __________

**Warm-Up #2:** Evaluate \( y = 2x^2 - 3x + 5 \) for each of the given values.

- a) \( x = -3 \)
- b) \( x = 3 \)

**Warm-Up #3:** Evaluate \( y = 3x - 5 \) for each of the given values.

- a) \( y = 10 \)
- b) \( y = -26 \)

---

Functions can be written using function notation. For example, \( y = 3x + 2 \) can be written as \( f(x) = 3x + 2 \).

\[ f(x) \] is read as “\( f \) of \( x \)”

**Investigation:** If \( f(x) = 3x + 2 \) determine the following.

- a) \( f(-3) \)
- b) \( f(-1) \)
- c) Predict the value of \( f(0), f(3) \).
**Example #1:** If \( p(a) = -2a + 5 \), determine the following:

a) \( p(-2) \)  
b) \( p(1) \)

c) \( a \), if \( p(a) = 1 \)  
d) \( a \), if \( p(a) = -5 \)

e) Use your results to create a table of values.

<table>
<thead>
<tr>
<th>( x )</th>
<th>( y )</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

f) Graph the function.

[Graph of the function]

g) Is this discrete or continuous data? Explain.

**Example #2:** If \( g(x) = 5x - 1 \), determine a simplified expression for each of the following:

a) \( g(2x) \)  
b) \( g(x - 5) \)
Example #3: Use the graph below to determine the values.

a) \( f (-1) \)

b) \( f (0) \)

c) \( x \) when \( f (x) = 1 \)

d) \( x \) when \( f (x) = 4 \)
Function Notation:

There is a special way to write functions. This is called function notation.

Consider the following comparisons:

<table>
<thead>
<tr>
<th>Equation</th>
<th>Function Notation</th>
</tr>
</thead>
<tbody>
<tr>
<td>( y = x + 2 )</td>
<td>( f(x) = x + 2 )</td>
</tr>
<tr>
<td>( y = 3x - 5 )</td>
<td>( f(x) = 3x - 5 )</td>
</tr>
<tr>
<td>( C = 20t + 1200 )</td>
<td>( C(t) = 20t + 1200 )</td>
</tr>
<tr>
<td>( G = 3h^2 - 2 )</td>
<td>( g(h) = 3h^2 - 2 )</td>
</tr>
</tbody>
</table>

- Function notation allows us to use letters appropriate to our function and differentiate between several functions (give them unique names).
- Also the notation tells us which variable is dependent on the other.

Eg. \( g(h) = 3h^2 - 2 \) tells us that function \( g \) is written in terms of \( h \). That is, \( g \) depends on \( h \).

Function notation can also be used to tell us to perform an operation.

Evaluate \( f(2), f(-3), f(x + 2) \) for the function \( f(x) = 3x + 7 \):

\[
\begin{align*}
  f(2) &= 3(2) + 7 \\
  f(-3) &= 3(-3) + 7 \\
  f(x + 2) &= 3(x + 2) + 7 \\
  f(2) &= 13 \\
  f(-3) &= -2 \\
  f(x + 2) &= 3x + 6 + 7 \\
  f(x + 2) &= 3x + 13
\end{align*}
\]

If \( f(x) = 5x - 6 \), find

\[
\begin{align*}
  110. f(4) &\quad 111. f(-1) &\quad 112. f(-3 + x) \\
  113. g(4) &\quad 114. g(-1) &\quad 115. g(x - 1)
\end{align*}
\]

If \( g(x) = 2x - 4 \), find
If \( h(x) = 5x^2 - 6 \), find

<table>
<thead>
<tr>
<th>116. ( h(4) )</th>
<th>117. ( h(-1) )</th>
<th>118. ( h(x + 1) )</th>
</tr>
</thead>
<tbody>
<tr>
<td>( h(4) = 5(4)^2 - 6 )</td>
<td>( h(-1) = 5(-1)^2 - 6 )</td>
<td>( h(x + 1) = 5(x + 1)^2 - 6 )</td>
</tr>
<tr>
<td>( = 5(16) - 6 )</td>
<td>( = 5(1) - 6 )</td>
<td>( = 5(x^2 + 2x + 1) - 6 )</td>
</tr>
<tr>
<td>( = 80 - 6 )</td>
<td>( = 5 - 6 )</td>
<td>( = 5x^2 + 10x + 5 - 6 )</td>
</tr>
<tr>
<td>( = 74 )</td>
<td>( = -1 )</td>
<td>( = 5x^2 + 10x - 1 )</td>
</tr>
</tbody>
</table>

**Use your graph in Q125 to check answers for Q122 and Q124.**

If \( q(x) = x^2 + 2x + 3 \), find

<table>
<thead>
<tr>
<th>119. ( q(4) )</th>
<th>120. ( q(x + 1) )</th>
<th>121. ( q(2x - 3) )</th>
</tr>
</thead>
<tbody>
<tr>
<td>( q(4) = 4^2 + 2(4) + 3 )</td>
<td>( q(x + 1) = (x + 1)^2 + 2(x + 1) + 3 )</td>
<td>( q(2x - 3) = (2x - 3)^2 + 2(2x - 3) + 3 )</td>
</tr>
</tbody>
</table>

If \( g(x) = -2x + 1 \), find

| 122. \( g(4) \) | 124. \( g(-1) \) | 125. Graph \( g(x) \)
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

</tbody>
</table>

GIVEN THE FUNCTION...

Each element of the range is equivalent to the square of an element in the domain.

The following two examples demonstrate a relationship between two quantities.
A computer service technician charges a fee of $120 to assess a problem and a fee of $60 per hour to fix the problem. If the high school network requires 12 hours of work, what will the total cost be?

Cost:
= $120 + 12($60)
= $120 + $720
= $840

This is a relationship between time worked and cost.

We could show this as (12, 840).

The height of a thrown object can be modeled as a function of time (since it was thrown) by the following equation.

\[ h(t) = -5t^2 + 12.5t + 100 \]

Find the height of the object 2 seconds after it has been thrown.

Height is found by substituting 2 into the right side of the equation.

\[ h(2) = -5(2)^2 + 12.5(2) + 100 \]
\[ h(2) = -20 + 25 + 100 \]
\[ h(2) = 105 \text{ } m \]

This is a relationship between height and time.

We could show this as (2, 105).
Solve each problem using any strategy that works.

| A computer service technician charges a fee of $120 to assess a problem and a fee of $60 per hour to fix the problem. |
| The height of a thrown object can be modeled as a function of time since thrown by the following equation. |
| $h(t) = -5t^2 + 12.5t + 100$ |

149. If the high school network requires 7 hours of work, what will the total cost be?

150. What are the two variables in this problem?

151. Which variable would be the “dependent variable?” (see pg.30)

152. Does the dependent variable correspond to the domain or range?

153. Do you think this problem models discrete or continuous data? Explain.

154. What is significant about the point (0,120)?

155. Find the height of the object 3 seconds after it has been thrown.

156. Can you think of any values for time ($t$) that don’t make sense?

157. What does time represent domain or range?

158. Can you think of any values for height ($h$) that don’t make sense?

159. Is height the dependent or independent variable?

160. Use the graph on the previous page to estimate the time it takes the object to reach maximum height.

BONUS: Can you calculate the time it takes the object to land?
Solve each problem using any strategy that works.

161. A bike technician charges $40 for a basic tune-up and $20/h for any additional work.

Write an equation that relates cost (C) to time (t) for the scenario above.

162. Create a table for the scenario above.

<table>
<thead>
<tr>
<th>Time (hours)</th>
<th>Cost ($)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

163. Graph the relation above.

164. The population of a colony of bacteria grows through cell division. The doubling time for the population is 30 minutes. Complete the table below for the growth of bacteria starting with one bacterium.

<table>
<thead>
<tr>
<th>Time (minutes)</th>
<th>Number of Bacteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td></td>
</tr>
<tr>
<td>30</td>
<td></td>
</tr>
<tr>
<td>60</td>
<td></td>
</tr>
<tr>
<td>90</td>
<td></td>
</tr>
<tr>
<td>120</td>
<td></td>
</tr>
<tr>
<td>210</td>
<td></td>
</tr>
</tbody>
</table>

165. Graph the relation above.

166. What numbers are acceptable values for the horizontal axis (domain) of the graph above? (Think about what numbers would not make sense.)
167. Going to the movies. The cost of going to the movies for a group of grade 10 students is represented by the equation \( C = 10.5n \).

a) What is a reasonable range for this function?

b) What is the dependent variable?

c) Write the equation using function notation.

168. Driving Distance. JJ leaves Nanaimo driving north. At the time he left, he was 105 km from home. The following graph represents the relationship between distance from home and elapsed driving time.

The equation for the relation \( d(t) = 50t + 100 \).

a) Explain why the function is called \( d(t) \).

b) Suggest a reasonable domain for the function \( d(t) \).

c) Find \( d(3) \).

d) Why is the graph a line and not a series of dots?
169. Halloween dance. Student’s Council plans on hiring DJ-Jae-Sun for this year’s Halloween dance. Jae-Sun appreciates what he remembers of math functions and sends the council the following pricing information.

\[ C(n) = 2000 + 17.50n \]

a) Explain what you think the equation above means.

b) What would be a reasonable domain at your school?

c) What is a reasonable range for your school?

d) What does the range represent?

e) Is this the dependent or independent variable?

170. Wedding banquet. Lin-Karen is planning her dream wedding. Catering costs are a function of the number of people that attend the wedding. A high end caterer quoted Lin-Karen a set-up cost of 1500 dollars plus 75 dollars per guest.

a) Write the cost as a function of the number of guests using function notation.

b) Is this Discrete or Continuous data?

c) Graph the relation above using a reasonable domain. Use a ruler to mark your axes. Label your axes with “Number of Guests” on the horizontal axis.
General relations

When considering some relationships, it is solely the pattern or trend that we are interested in.

Can you visualize a graph for the following relationships?

- The height above the ground of a passenger on a Ferris Wheel as a function of time.
- The number of cars in a parking lot as a function of the time of day.
- Temperature of a cup of coffee as a function of time since it was poured.
- The cost of mailing a package as a function of its mass.
- The height of a football as a function of time since it was kicked.

Match each of the following with an example from above. Then describe below why you made that choice.

Answer the questions associated with each graph.
<table>
<thead>
<tr>

</table>

178. To hire a plumber to fix his drain, Mr. J had to pay an initial "call-out" fee of $60 then he had to pay the plumber $45 per hour. Graph the Cost as a function of Time in hours for this service.
Answers:

1. Answers may vary.
   Possible relations:
   Age and height, cost and time, wage and hours,
   ...
2. (27 years, 180 cm),
   (9 years, 110 cm)
   (0.6 years, 55 cm)
3. Their order is important.
4. Height and Arm Span.
5. 

6. Points appear to resemble a line.
7. Check with a classmate or teacher.
8. y-axis
9. x-axis
10. Graph on left includes negative coordinates.
11. Graphs of data where negatives are not included. (eg. Distance vs. Time)
12. Graphs of data where negatives are appropriate. (eg. Altitudes, temperatures)
13. Two units right and five units up of the origin (middle).
14. 

15. 

16. 

17. Same as Q15. All input values "make sense" mathematically.
18. Same as Q16. Any value of 'x' less than -2 will make the equation (function) undefined over the set of real numbers.
19. The graph will have breaks or stopping points where values are not permitted.
21. Any real value is a possible element of the domain.

22. $-2, 5$. Any real value is a possible element of the domain.

23. $-7, 1$. Any real value is a possible element of the range.

24. No negative values can be contained in the range.

25. No negative values can be contained in the range.

26. No negative values can be contained in the range.

27. No negative values can be contained in the range.
33. Domain: \{1,2,3,4\}, Range: \{1,4,9,16\} or \{x|1,2,3,4\}, \{y|1,4,9,16\} \\
34. \\
35. \\
36. Domain: \{1,2,3,4\}, Range: \{1,4,9,16\} or \{x|1,2,3,4\}, \{y|1,4,9,16\} \\
37. a and d \\
38. \{x|-2,3,5,8\} \\
39. \{y|3\} \\
40. \{x|-1,0,1,2,3\} \\
41. \{x \geq 0, x \in \mathbb{R}\} The domain is the real numbers greater than or equal to zero. \\
42. Infinite \\
43. 0 \\
44. There is not a largest value. Infinity. \\
45. Infinite \\
46. 2 \\
47. There is not a largest value. Infinity. \\
48. \(-\infty, \infty\), \((-\infty, \infty)\) \\
49. \{x|x \geq -4,x \in \mathbb{R}\}, \{y|y \geq 1,y \in \mathbb{R}\} \\
50. 

51. The domain consists of all real numbers from -6 to 5 inclusive. 
   The range consists of all real numbers from -1 to 2 inclusive. 
52. \{x|-5 < x < 7, x \in \mathbb{R}\}, \{y|y = 4\} 
53. \((-\infty, \infty), (-\infty, \infty)\) 
54. Find the upper and lower limits. Separate them with a comma. Use a square bracket if the limit is included, a curved bracket if it is not. 
55. Plot the limit(s) on a number line with a solid dot if included or hollow dot if excluded. Draw an arrow/line in the appropriate direction (unless the data is only a point or points). 
56. Find the limit(s). Choose the correct symbol, <, \leq, >, \geq, \neq. Fill out the inequality using one of the following as a guide: 

57. A.4 B.5 C.3 D.6 E.1 F.2 
58. \{x \in \mathbb{R}\}, \{y \in \mathbb{R}\} 
59. \([-7,6],[ -5,7]\) 
60. 

61. \{x|-5 \leq x \leq 8, x \in \mathbb{R}\}, \{y| -3 \leq y \leq 5, y \in \mathbb{R}\} 
62. \((-6, \infty), (-\infty, 3)\) 
63. 

64. \{x|2\}, \{y|-3,-1, 1, 3\} 
65. \{x|-7,-5,-3,6\}, \{y|-4,5,7\} 
66. \((-8,9), [-5,7]\)

c) 250
169. a) \( C(n) = 2000 + 17.50n \)
The DJ charges a $2000 fixed cost in addition to $17.50 per hour or possibly per student. It is not clear what \( n \) represents. I will work assuming \( n \) represents hours.
b) eg. \( \{n|0 \leq n \leq 4, n \in \mathbb{W}\} \)
c) eg. \( \{C|2000, 2017.50, 3035, 2052.50, 2070\} \)
d) Cost of the DJ.
e) Dependent
170. a) \( C(n) = 1500 + 75n \)
b) Discrete
171. Many answers. Eg. Wage ($/hr)

172. Many answers. Eg. Cost to hire a taxi.

173. The heating element must turn on and off to maintain an approximately constant temperature.

174. The ball is kicked from a height above zero (ground).

175. The rise and fall of a stock's price over time.

176. Each line on the graph represents a range of masses. There is not a different price for every possible mass. For example, it currently costs $0.64 to send any letter under 30g from one part of Victoria, B.C. to another.

178.
